1. Introduction

This current project involves designing and creating my own personal website which would serve as a means of displaying my education and skill set. It was developed using HTML and CSS programming languages, and published using GitHub Pages. This project purpose was to introduce me to the basics of web development.

---

2. Tools and Technologies Used

- Visual Studio Code (Code Editor)
- HTML (Structure of the webpage)
- CSS (Styling and design)
- Git and GitHub (Version control and repository management)
- GitHub Pages (Website deployment)

---

3. Steps Followed

Step 1: Creating the Webpage

- Created a basic HTML file (index.html)
- Structured the webpage using semantic tags like <header> and <section>
- Added sections such as About Me, Education, Skills, Projects, and Contact

Step 2: Adding Content

- Employed personal data like my name, email, and educational background.
- Gave an account of technical skills, concepts learned, OOPS, and DSA, among others.
- Added my projects, description, and technologies used.

Step 3: Styling with CSS

- Created a separate CSS file (style.css)
- Linked CSS to HTML using <link rel="stylesheet">
- Applied styles like colours, padding, margins, borders, and layout
- Customized elements such as headings and underlines

Step 4: Debugging and Fixing Errors

- Fixed incorrect usage of <ul> and <li> tags
- Solved issues on CSS not styling because of the wrong filename used.
- Corrected margins and padding.
- Better design and readability.

Step 5: Uploading to GitHub

- Created a repository on GitHub
- Uploaded HTML and CSS files
- Used Git commands to commit and push changes

Step 6: Deployment

- Enabled GitHub Pages from repository settings
- Successfully deployed the webpage

- Obtained a live link to access the website

---

4. Problems Faced and Fixes

Challenge 1: CSS Not Applying

- Problem: Styles were not being shown on the page.
- Fix: Fixing of CSS File name.

Challenge 2: Incorrect List Structure

- Issue: Improper use of <ul> and <li> caused formatting issues.
- Fix: Learning to nest things correctly.

Challenge 3: Spacing Issues

- Problem: Space between the elements.
- Fix: Using CSS for margin and padding issues.

Challenge 4: Understanding Layout

- Problem: Using CSS for margin and padding issues.
- Fix: Difficulties in structuring sections.

---

5. Conclusion

I have gained knowledge on the basic principles of web page development through this task, which includes organizing data using HTML, designing using CSS, and hosting web pages using GitHub Pages. Furthermore, this assignment helped improve my problem-solving abilities. Overall, this assignment provided me with hands-on experience in developing a portfolio website.

6. Learning Reflections (10 Key Points)

1. Gained knowledge about creating website structure using HTML tags such as <headers>, <sections>, and lists.
2. Learned the right way of designing websites by using colours, padding, borders, and margins in CSS.
3. Learned about the differences between padding and margin. Learned how to properly use <ul> and <li> for creating structured lists.
4. Understood the importance of linking CSS files correctly using <link rel="stylesheet">.
5. Improve ability to debug due to fixing of issues like incorrect use of the file name and other layout issues.

6. Gained skills in working with Git and GitHub for storing and revising code.
7. Acquired skills of deploying websites through GitHub Pages.
8. Learned how to design an appealing user interface design.
9. Developed problem-solving and reasoning skills through resolving of issues in code.

---

7. Importance of a Personal Webpage

In the current era, it is quite important for individuals to have a personal website since this would enable them to make an impact in their respective online communities. In essence, a personal website serves the same purpose as a portfolio where an individual showcases his or her skills and achievements. In such a manner, it would become easier for people interested in hiring them.

Further, through a personal website, an individual manages to create a professional image for themselves and they do not have to worry about circulating their portfolio because all they have to do is pass on the link of their personal website. Through this website, not only does an individual showcase his or her creativity but also their technical prowess.

About Me

A sophomore at VIT Vellore with a strong interest in web development and problem solving. Always curious about improving my skills relevant to the real world.

Education

- UG at VIT Vellore (2024 - 2028)
- Schooling from VSPK International School (2024)

Skills

Technical Skills

- Programming: Java, C, C++, Python
- Web: HTML, CSS, JavaScript
- Tools: Git, VS Code

Core Computer Science Concepts

- Object-Oriented Programming (OOPS)
- Data Structures and Algorithms (DSA)

Soft Skills

- Communication
- Teamwork
- Critical Thinking
- Analytical Thinking
- Problem Solving

Projects

Flicksy - Movie Recommendation Website

Flicksy is a movie recommendation web application that suggests personalized movies based on user-selected genres and interests. It helps users find content that matches their mood and vibe.

- Technologies Used: HTML, CSS, JavaScript

Research Paper

Energies consumption of various households. We improve electricity load forecasting by combining signal decomposition (VMD) with Transformer models.
